

Muaz Husaini.

Muhammad Muaz Husaini bin Rosli

muazhusaini@gmail.com · mmuazhr.github.io · github.com/mmuazhr · linkedin.com/in/muazhusaini · Kuala Lumpur, Malaysia

AI Engineer building production multi-agent systems on Google Cloud. I ship agents with grounding guardrails, verification loops and full LLMOps ownership, not demos.

EXPERIENCE

Maxis, IT Associate (Data & AI DevOps)

Jan 2026 - present

Graduate Program, current rotation. Kuala Lumpur.

- Designed and deployed a production agentic NL2SQL business-analyst agent on Vertex AI Agent Engine (Google ADK, BigQuery), letting non-technical users query complex telecom KPIs in natural language.
- Engineered the multi-agent architecture: semantic routing, M-Schema-aware SQL generation, and data-grounding guardrails that eliminated hallucinated numerical outputs by validating every response against live BigQuery results.
- Built multi-turn conversational memory, query planning, anomaly detection and abstention handling, with structured narrative, chart and table output for executive insight.
- Own the end-to-end LLMOps loop: containerized Cloud Run deployment, versioned prompts and agent configs, production reliability and cost monitoring.

Maxis, Consumer Business Associate (Go-to-Market)

Aug 2025 - Jan 2026

- Built go-to-market strategy for Maxis and Hotlink merchandising campaigns from market research and commercial data analysis; managed campaign execution across pre-launch, launch and post-launch.
- Drove rebate-assignment process automation for newly launched plans, cutting manual processing and accelerating campaign readiness.

Maxis, Consumer Business Associate (Mobile Product)

Jan 2025 - Jul 2025

- Financial modelling and data analysis of pricing, discounts and subsidy effectiveness for mobile device ownership; targeted campaigns from segmentation, sales-trend analysis and ROI modelling.

Deloitte Consulting SEA, AI & Data (Inspires Program)

May 2024 - Aug 2024

- Contributed to NavigAite, a generative AI solution automating document tasks: ML models for summarization, PII identification and initial contract review on Microsoft Fabric and Lakehouse.
- Business analyst on a dashboard migration: requirement analysis, data-model refinement, and deployment on Tableau Server.

PJBUMI Heavy Engineering, MLOps Apprentice

Aug 2023 - Feb 2024

- Led AI model development for asset inspection services (AIMS) used with oil and gas clients, including a Petronas engagement: defect detection and real-time asset-health assessment.
- Built InOutVision (face-recognition attendance with OpenCV and TensorFlow, Power BI dashboards) and a CNN-based stockpile volume tracker served with Flask.

SELECTED INDEPENDENT BUILDS

- Job Agent:** Claude-driven application pipeline where every generated bullet must cite a stored fact and unsourced claims are rejected before rendering; ~190 test files, Airflow discovery, Playwright autofill.
- QueLess:** QR queue and order-ahead SaaS live on Railway (Next.js, Prisma, Postgres) with CI, health checks and Sentry.
- Content Studio:** Airflow-orchestrated AI video pipeline with schema-validated Claude generation and a human approval gate.

EDUCATION

BSc Computer Science (Hons), UKM
First Class Honours, CGPA 3.88. Dean's List, 8 of 8 semesters.
Graduated Dec 2024.

CERTIFICATES

IBM AI Engineering (Coursera, 2024)
Google Data Analytics (Coursera)

SKILLS

AI engineering: multi-agent orchestration (Google ADK, Vertex AI Agent Engine), LLM grounding and guardrails, agent evaluation and adversarial QA, LLMOps on Cloud Run, Firestore policy stores.
Data: Python, SQL, BigQuery, Power BI and DAX, Microsoft Fabric, machine learning (scikit-learn, TensorFlow, PyTorch).
Product: financial modelling, go-to-market analysis, stakeholder delivery across business and engineering.
